San Bernardino City Unified
Upland Unified

Tooth decay, also called cavities, is the most common disease in kids. The good news is that we can stop it from happening!

53% of all schools have a dental program

48% of schools have onsite kindergarten screenings

47% of schools have onsite preventative services like cleanings

Smile SBC School Provider Survey 24/25

Almost three out of four 3rd graders, and more than half of kindergarten students in the county have had tooth decay.

Missed school days due to dental problems cost California school districts about \$60 million a year.

A dental program at your school can lower absences and provide easy access to dental services for students and their families.

If you are interested in establishing a dental program at your school, please reach out to us via email at info@smilesbc.org or scan the QR code.
